About NANAVU

NANAVU is a national-level Sustainability Conclave exploring how sustainable construction can be empowered as a practical, affordable, accessible, and rewarding pathway for the next generation of professionals. Bringing together education, industry, research, practice, and policy, NANAVU creates a platform to explore new materials, technologies, practices, and career opportunities that can make sustainable construction a preferred choice-without compromising quality, performance, or value. Through panel discussions, technical talks, and student innovation, the Conclave aims to connect education with practice and turn ideas into collaboration, action, and long-term impact.

02

About the Campus Sustainability Council (CSC) – TKMCE

The Campus Sustainability Council (CSC), TKMCE is a body comprising faculty, students, and industry experts, established to drive action-based sustainability transformation across TKMCE. The Council aims to transform the mindset of the campus towards sustainability through collective action, learning, innovation, and collaboration, while nurturing a generation of responsible, sustainability-oriented citizens.

03

About Naamearth

Naamearth is a sustainability-driven initiative dedicated to advancing natural regenerative, and responsible approaches to sustainability. It combines traditional knowledge, contemporary engineering, research, and hands-on practice to explore solutions that are ecologically, affordable, resilient, and relevant to the future of construction.

04

What Happens at NANAVU

NANAVU brought together educators, architects, engineers, practitioners, researchers, and students to explore practical pathways for sustainable construction through four key engagements:

Interactive Technical Sessions

Expert-led sessions on emerging materials, technologies, and practices in sustainable construction, with opportunities for interaction and knowledge exchange.

Panel Discussion

Bridging Education and Practice: Why Sustainability Remains Optional in Construction – exploring the gap between education and professional practice and how sustainability can become integral to construction.

Concept Pitching Competition

The 2050 Kerala Home – imagining a Kerala home that is affordable, low-carbon, climate-resilient, and comfortable.

Exhibition

A showcase of innovative ideas, materials, technologies, and student projects focused on sustainable construction.

National . Sustainability . Conclave
