

NANAVU

NURTURING THE FUTURES

Organised by

Campus Sustainability Council (CSC), TKMCE Kollam.

Jointly with Naamearth Sustainable Initiative

ABOUT SUSTAINABILITY COUNCIL - TKMCE

The Campus Sustainability Council (CSC), TKMCE Kollam, is an cross-disciplinary body comprising faculty, students, and industry experts, established to drive sustainability transformation across the campus. It focuses on integrating sustainability into learning, practices, and campus systems through student engagement, green campus initiatives, sustainability audits, experiential learning, innovation, research, and industry collaboration. Ultimately, CSC aims to nurture responsible citizens who think, practise, innovate, and carry sustainability forward

ABOUT NANAVU

NANAVU - Nurturing the Futures is a national-level sustainable conclave exploring how sustainable and natural construction can become a practical, affordable, accessible and rewarding pathway for the next generation of professionals. It brings together education, industry, research, practice and policy to explore materials, technologies, practices and career opportunities in sustainable construction. To nurture a future where sustainable construction is accessible, practical, valued and a rewarding professional pathway.

ABOUT NAAMEARTH

Naamearth is a sustainability-driven initiative dedicated to advancing natural, regenerative, and responsible approaches to the built environment. It brings together traditional knowledge, contemporary engineering, research, and hands-on practice to explore solutions that are ecological, affordable, resilient, and relevant to the future of construction.

Naamearth seeks to empower the next generation of architects, engineers, educators, researchers, and practitioners with the knowledge, skills, and experience needed to transform the way we design and build. Through experiential learning, research, workshops, and collaborative projects, it creates opportunities to move beyond conventional practices and engage directly with sustainable building technologies and materials.

WHAT HAPPENS AT NANAVU

A one-day gathering that brings together students and professionals to explore sustainable ideas, innovations and approaches for a more responsible built environment..

01

PANEL DISCUSSION

Exploring the growing scope of sustainable construction, emerging career pathways and opportunities for young professionals. The session aims to help students understand where sustainability can take their careers and how they can connect their education with real-world practice..

02

TECHNICAL SESSIONS

Technical sessions led by practising professionals focusing on sustainable and natural construction, its possibilities, practical applications and future scope. The sessions introduce students to approaches, materials, technologies and practices that demonstrate how sustainable construction can work without compromising quality, performance or value.

03

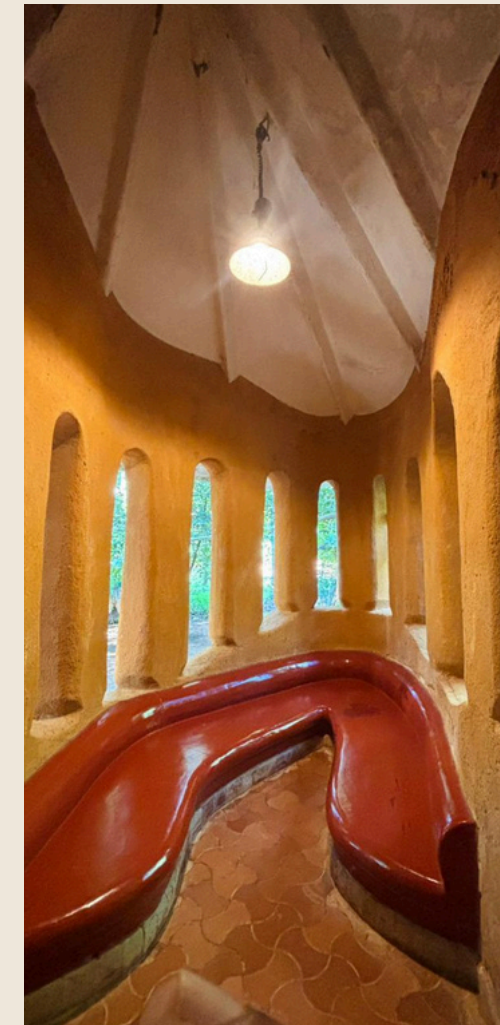

EXPO

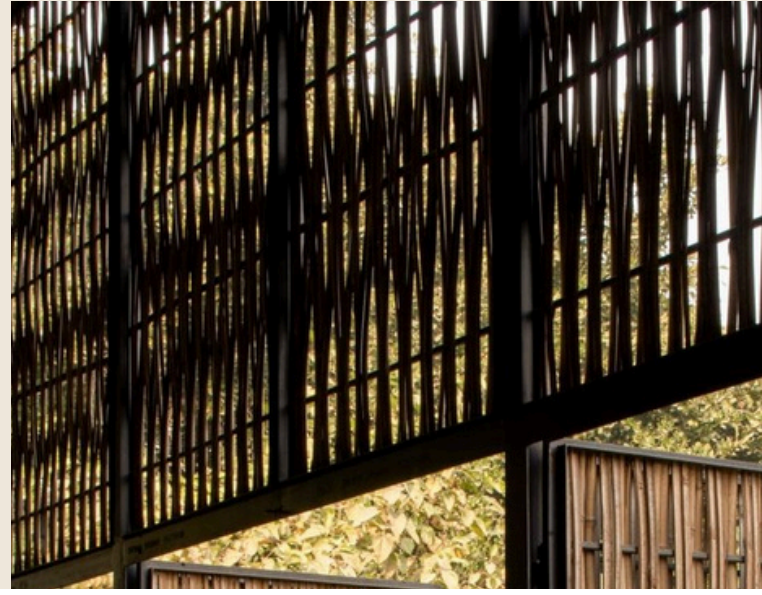

An interactive showcase of ideas, models and innovations that demonstrate how sustainability can be translated into practical design and construction.

04

IDEATHON

A platform for students to think creatively, develop practical solutions and turn ideas into meaningful responses to real-world sustainability challenges.

THANK YOU
